Real Progress is the Perfect Fusion of Innovative Workflow and Manufacturing Technology

- Sun Dental Lab's innovative Digital Manufacturing Technology delivers improved accuracy, faster turnaround time, and patient satisfaction.

Digital Manufacturing Process

- We use SunScanM, the first in lab impression and model scanner. Every crown & bridge impression is scanned for quality control and manufacturing.
- The doctor will receive a 3D digital impression image with detailed information about the margin, undercuts, and bites for review of the impression and QC status.
- The impression is stored in the cloud. That means you can reuse the impression file without the need to call the patient for a second impression if the shade is off, or the patient breaks a tooth.

All crown and bridge cases are created with a **FREE** epoxy like digital model that will not abrade or break for a better fit.
